

Community Profile Builder

In-Depth Guide on Gender and Age

<http://www.thearda.com/DemographicMap/>

Developed by Jennifer McClure

This guide is designed to help you understand the genders and ages of the residents in your neighborhood, community, or any area you select. This guide also contains information on the population size and its growth or decline. Using recent data collected by the U.S. Census, you can generate maps and a report that will help you to learn more about the area you want to serve.

- What is the total population in your area? Has this population grown or decreased in size?
- What is the gender ratio within your community?
- What age groups are represented in your community?
- How do age groups vary across different neighborhoods?
- How do the age groups in your community compare with the United States?

These are just a few of the many questions that can be explored using this guide and the ARDA's Community Profile Builder.

First Steps

Using the ARDA's Community Profile Builder online tool is easy. The following are step-by-step instructions on how to start gathering quality data on your community:

1. First, go to the following address: <http://www.thearda.com/DemographicMap/>
2. Enter your U.S. ZIP code, city and state, or complete address in the box at the top of the page and click "Go." After clicking "Go," the map will take you to your community and show you all of the congregations in the area.
3. Enter the radius (in miles) that you would like the online tool to include. One option is to think of driving distance. How far do people typically travel to come to your congregation?
4. Click on the map to set the center point for the radius you selected. A dashed circle will appear showing you the areas from which the tool will draw its data.
5. Finally, click the "Profile" button. Doing so will generate your report for the area you selected.

6. This first page will give you some introductory information about the area you selected. For more information, see “About Your Profile” at the end of this guide.

7. Investigate gender and age in your community by clicking on the “Gender/Age” tab!

Gender and Age in Your Community

This first page of information provides the following information about your community, and this information has important implications for congregations.

Population size – How many people live in your community? Has this number increased or decreased? Sometimes growth and decline in a community can shape whether congregations grow or decline.

Gender – How many people in your community are male, and how many are female? Some congregations offer gender-specific ministries.

Age – What age groups are represented in your community? The ARDA offers a table with broad age categories and also a more detailed table with many age categories. These tables provide insight on what age ranges congregations can serve in their communities—children, youth, young adults, middle-age adults, and older adults.

This information is also presented in the ARDA’s Community Profile Builder Guide. The ARDA has additional information on gender and age that is not presented in the Community Profile Builder Guide.

Digging Deeper

Want to learn even more about different age groups in your community? Find the yellow box under the “Gender/Age” tab, and click on “Age groups data and color coded maps.” You can now get additional information about:

- Variations in your community – What neighborhoods have more young adults?
- Your community vs. the USA – Compared to the USA, are certain age groups more or less common in your community?

Starting with the map, explore what neighborhoods in your community have more young adults. Many congregations are trying to minister more effectively to young adults. Based on your knowledge of your community, to what extent are there young adults in your community to whom you can minister?

Below the map, there are graphs that compare the characteristics of your community with the characteristics of the USA. These graphs contain information on:

- Broad age groups
- Children and youth
- Young adults

- Middle-age adults
- Older adults

These graphs are helpful for determining what age groups are normal in the country and how the age groups within your community are unique. Could your congregation offer age-specific ministries for people in your community?

There are many ways in which congregations can serve different age groups. Some congregations have children's and youth ministries, and other congregations offer preschools and after-school programs. Some congregations have college-age or young adult ministries, and other congregations have ministries for parents and middle-aged adults. Some congregations have ministries for retirees and provide volunteer opportunities for retirees to serve in their congregation and community.

Preparing to Serve

In addition to the ministry applications suggested throughout this guide, this section provides some questions to consider when thinking about how to address needs in your community.

- What stands out to you about the genders and ages of people in your community?
- How do the age groups in your community compare with those in your congregation?
- Is there a specific age group to which your congregation wants to minister?
- How can you reach out to age groups that are underrepresented in your congregation?
- What community-based resources can you consult to learn more about needs of different age groups?
- Is there a specific neighborhood in which you want to serve?
- Do you know people in the neighborhood where you want to serve? If you do, talk with them about what they feel is needed in their neighborhood. If not, how can you develop relationships there?
- What do you need to serve different genders and age groups in your community (volunteers, skills, space, etc.)?
- Are there other congregations and social service organizations in your community with which you can collaborate?
- Are there needs around which you can advocate in your community?
- Once you have identified an age group to which you want to minister, is someone already effectively addressing this need in your community? Can you collaborate with them?

About Your Profile

Geographic Area

On the “Introduction” tab, the dashed circle represents the radius you designated on the previous page. The map also shows the [census block groups](#) (areas of 600-3000 people) that are included in the report. It is important to realize that any census block group that is touched by the radius you designate is included, even if the radius only covers a small portion of the total census block group. The map also provides markers for each congregation on the map. In the text above the map, you can find the total number of block groups included in the report, the counties from which these results are drawn, and the total population included in the report. This information is repeated at the top of the “Gender/Age” tab as well.

Data Sources

The information shown here is drawn from the American Community Survey (ACS), which is the largest household survey in the United States. Each year, about one in 38 U.S. households are invited to participate in it. The ACS collects the information shown in this tab and other important data in order to describe the characteristics of people and housing in the United States. For more information, go to the [U.S. Census](#).

Understanding the Data

There are three ways to numerically describe the gender and age data, all of which provide important information about your community.

1. **Raw numbers** indicate the number of people in your community that have a certain characteristic. If you care about, for example, the number of young adults in your community, this number is for you.
2. **Percentages** indicate what share of the population has a certain characteristic. For each characteristic, we give you these percentages in parentheses. If you care about, for example, the percentages of women and men, this number is for you.
3. **Percentage change** indicates whether certain characteristics are becoming more or less common in your community. Positive percent changes denote increases while negative percent changes signal decreases. If you care about, for example, whether the number of teenagers has increased or decreased in your community, this number is for you.
